

Project idea form

Project title

Registry of brownfield sites - development,
analysis and visualization

Main issues you intend to address in relation with the theme.

Problem of development of systematized typology of brownfield sites and development of register or geospatial database, collection and interpretation of documentation and its' visualization. Question that we would like to get answer to is how to develop a framework which would be applicable in other European cities.

Is your project a follow-up to a previous project? If so, which programme and project?

The project is a follow-up of an Croatian – Austrian bilateral scientific project „Differences of Post-industrial and Post-socialist Brownfield Redevelopment and its Socio-spatial Impact on Current Urban Development Processes. A Comparative Analysis of Vienna and Zagreb”, and an EU project SINERGIE (Social Integration Through Urban Growth Startegies), projekt fonda Europe for Citizens.

Partners needed: Please indicate the desired partner profile (sector, experience).

We would like to find partners in the academic community (in different fields) and in city structures (since we have developed a good communication and partnership with the City office of Strategic Planning and Development of the City of Zagreb.
